## Consent Order of Dismissal, Section III.7 (2) Formulation of Grout Used to Treat and Solidify the Salt Waste

The grout formulation is defined by the proportions of dry premix components (Type II Portland cement, Class F flyash, and Grade 120/100 slag) and the ratio of the water content in the salt waste to dry premix. Small quantities of admixtures are added as required for the purposes of set retardant and anti-foam. These have an insignificant effect on the overall grout composition (0.2 wt% of the overall grout composition).

The formulation used for the reporting period is shown below:

### Saltstone Dry Premix Composition

Component	Weight %
Type II Portland cement	10
Class F flyash	45
Grade 120/100 slag	45

**Water to Premix Ratio (by weight) – 0.60**

Utilizing this grout formulation leads to an overall grout composition as shown below:

### Overall Grout Composition

Component	Weight %
Salt Waste	43
Type II Portland cement	6
Grade 120/100 slag	26
Class F flyash	26
